

Sensorimotor Psychotherapy Institute

Do you struggle to help numb, disconnected clients who can't feel emotion or explore inner experience?

Do your clients get 'stuck' in overwhelming emotions and self-destructive impulses rather than resolving the trauma?

This 80-hour training equips therapists to make sense of the symptoms and issues of traumatized clients and work with them more effectively. Understanding how trauma is remembered and equipped with interventions that speak directly to how post-traumatic issues are driven by the body, you will discover new and deeper ways of helping clients resolve the traumatic past.

Sensorimotor Psychotherapy for the Treatment of Trauma
